PROFESSIONAL SUMMARY

Computer Science student majoring in Artificial Intelligence with interests in machine learning, data analytics, and Industrial AI. Experienced in predictive maintenance, anomaly detection, and database systems. Seeking an internship to apply AI, data, and software development skills in technology and industrial projects.

TECHNICAL SKILLS

Programming: Python, C++, JavaScript, SQL, HTML

Tools & Visualization: Power BI, Tableau, GitHub, VS Code, Jupyter, Excel

Design & Web: Adobe Illustrator, Canva, CapCut

Robotics: TurtleBot3, ROS Basics

Language: English, Arabic

EDUCATION

Universiti Teknikal Malaysia Melaka (UTeM)

Bachelor of Computer Science (Artificial Intelligence) with Honours

Expected 2027

Melaka, Malaysia

EMS Language Centre

English Language Study – Elementary to Upper Intermediate

2022

Kuala Lumpur, Malaysia

TECHNICAL PROJECTS

AI-Based Predictive Maintenance System

Python, Scikit learn, Streamlit, VS Code, HTML

Developed an AI based predictive maintenance prototype for rotating equipment using Isolation forest to detect abnormal machine behavior. Applied data preprocessing and feature scaling to prepare sensor data for analysis, calculate machine health scores, monitor equipment condition, and generate alerts for early maintenance decisions.

Cinema Booking Ticket System

C++, MySQL

Developed a system that allows users to register, select seats, and make secure payments. The system also includes admin features for managing movie schedules, bookings, and financial reports. Implemented database normalization to keep the data structured, organized, and efficient.

Heart Disease Prediction Model

MATLAB, ANN, ML

Built a Heart Disease Prediction Model using MATLAB. The model was trained using a multi layer Perceptron (MLP) to predict the risk of heart disease based on patient data.

MindLock - AI-Powered Password Generator

Python, HTML, Canva

The project uses visual memory anchors and biometric based ideas to improve password usability and security. Integrated AI support features to promote safer password practices and improve cybersecurity awareness.

Traffic Carbon Emission Monitoring Dashboard

Python, Streamlit, Pandas, Plotly, Folium

Built a dashboard to visualize traffic congestion, vehicle volume, CO₂ emission estimates, and environmental risk levels. Integrated charts, filters, KPI cards, and an interactive heatmap to identify traffic hotspots and high-emission areas.

CERTIFICATIONS

- IBM Machine Learning Professional Certificate
- Google Data Analytics Professional Certificate
- Oracle Certified Foundations Associate, Database

Current: CGPA:3.05/4.0
